

Jamal Carter Jr

443-335-4874 | carterjamal889@gmail.com | www.linkedin.com/in/jamal-carter-2b556125a/

SUMMARY OF QUALIFICATIONS:

Computer Technology undergraduate pursuing a B.S. in Network Enterprise Infrastructure with a strong foundation in Linux/UNIX systems, networking (TCP/IP), and systems administration. Experienced collaborating in enterprise and cross-functional environments through internships and professional roles, with exposure to automation scripting (Python, Bash) and DevOps fundamentals. Adaptable, detail-oriented, and eager to contribute in secure, mission-driven technical environments.

EDUCATION:

Bowie State University, Bowie, MD

Anticipated December 2026

- Bachelor of Science in Computer Technology
- Concentration: Network Enterprise Infrastructure
- GPA 3.1

SKILLS AND RELEVANT COURSEWORK:

- Linux & UNIX Operating Systems (Linux Operating Systems, UNIX System Administration)
- Client Operating Systems & PC Architecture
- Systems Administration and Infrastructure Fundamentals
- Internet Technology & Networking Basics (TCP/IP)
- Database Fundamentals & Computer Science Concepts
- Automation & Scripting Exposure (Python, Bash)
- Microsoft Word, Excel, PowerPoint; Google Docs
- Strong problem-solving, communication, and collaboration skills
- Project management, adaptability, and attention to detail

SCHOOL PROJECTS

Computer Networking – Infrastructure Simulation Project

- Designed and simulated a multi-site network infrastructure using Cisco Packet Tracer, configuring LAN and WAN connectivity to support reliable inter-system communication and traffic flow.

Client Operating Systems – System Deployment & Configuration

- Deployed and configured multiple operating system environments (Windows 11, Windows 10, Windows 8, Linux) using bootable media; performed disk partitioning, user configuration, and system validation.

Introduction to Database Development – Data & Systems Project

- Built a relational database system to track movie ticket sales, view counts, and ratings; defined data models, relationships, queries, and constraints to support structured data management.

Mitnick Attack Lab – Network Security & Penetration Testing Project

- Set up and performed a simulated Mitnick TCP session hijacking attack in a Docker lab, using Python and Scapy to capture network traffic, examine TCP sequence numbers, and spoof packets from a trusted system.
- Used a rsh trust relationship to demonstrate how an attacker could execute remote commands and gain persistent access, while building hands-on experience with TCP/IP, packet spoofing, Linux networking, and network security.

Firewall Lab Setup – Kernel-Level Network Security and Packet Filtering Project

- Built and tested a Linux kernel firewall module using Netfilter to capture and inspect network packets, working with TCP, UDP, and ICMP traffic to understand how packet filtering works at the kernel level.
- Created and tested DNS traffic filtering and protocol logging rules using Docker containers, then used dmesg kernel logs and live network traffic to verify that packets were being detected and filtered correctly.

Wireshark Packet Analysis Lab – Network Forensics Investigation

- Used Wireshark to analyze captured network traffic and investigate suspicious HTTP activity, identifying important information such as source IP addresses, MAC addresses, protocols, and communication between devices.
- Examined HTTP requests and POST data to track user activity and piece together a timeline of events, gaining hands-on experience with packet analysis, network forensics, and identifying suspicious network behavior.

CERTIFICATIONS:

- Cisco CyberOps Associate – Cisco, Issued May 14, 2026
- Cisco Introduction to Packet Tracer

PROFESSIONAL EXPERIENCE:

International Business Machine (IBM), Baltimore, MD | *Technical Operations Intern* | July 2022 - June 2023

- Supported internal teams by coordinating workflows, documentation, and tools in a structured, enterprise environment.
- Collaborated with cross-functional teams to support operational processes, troubleshoot issues, and contribute to continuous improvement initiatives.
- Assisted with maintaining organized systems and tracking environments to support project execution and team efficiency.
- Participated in agile-style team collaboration, sharing feedback and supporting process enhancements.
- Applied strong problem-solving, communication, and technical aptitude while working alongside experienced professionals in a secure, large-scale organization.

a positive customer experience by delivering personalized service and building rapport with diverse customers.

COLLEGIATE ACTIVITIES:

Cyber Security Club

Bowie State university

March 2024 – Present

Bulldogs Coders club

Bowie State University

March 2024 – Present

BMORE BOLD

Bowie State University
